

RSE is a native company established and operating since 2005 at the Technology Business Incubator VITEC2. It is focused in the development, integration and application of energy efficiency and renewable energy technologies for both commercial and residential markets.

Energy Efficiency

- Energy audits by Certified Energy Manager (CEM®)
- Consulting in green building construction (LEED® Certification process)
- New Building Commissioning (Cx)
- Management of green building and energy efficiency projects
- Energy efficiency simulations for new and existing buildings
- Control systems for energy efficiency of HVAC systems
- Rainwater collection and treatment systems
- Computer modeling of energy usage in a building

Renewable Energy

- Solar and wind energy systems: stand-alone or interconnected to PREPA's grid (turnkey systems or consulting on design, installation and PREPA permits)
- Wind resource assessments
- Battery backup systems
- Solar lighting
- Solar water pumping (farming applications)

Goals of a comprehensive energy audit:

- *Identify types and costs of energy*
- *Understand how energy is used*
- *Identify cost-effective alternatives*
- *Provide an Energy Action Plan*

Incentives for Renewable Energy in PR:

- *Up to 50% on tax credits (Law 248 of 2008 for residential and commercial application & Law 73 of 2008 for tax exempt businesses)*
- *Up to 100% of rebates under the federal State Energy Plan (ARRA funds).*

ENERGY EFFICIENCY AND RENEWABLE ENERGY
